ABOUT ME

I am currently pursuing a PhD in Astronomy and Astrophysics at the University of Chicago. I study the circumgalactic gas around galaxies outside the Milky Way. Leveraging quasar spectra from the Hubble Space Telescope, I characterize the kinematics, chemistry, and thermodynamics of intervening gas clumps. I follow these studies up with observations from the Magellan and Very Large Telescopes to associate the identified absorbers to potential host galaxies surrounding the quasar line-of-sight.

EXPERIENCE

JOB TITLE 2020-2023
The Cool Company | *Earth, Alpha quadrant*

- Successfully sent 5 humans to Mars with the biggest blah
- Increased the average number of humans sent to Pluto by 146%

ANOTHER JOB TITLE 2016-2019
SweetWorld Technologies | *Santiago, Chile*
 (the most delicious division)

- Solved the world hunger by producing new nutritious candy

EDUCATION

MSc IN BREWING BEER 2020-2023
Dutch Beer University | Urk, The Netherlands

- Graduated with *summa cum laude*
- Thesis topic: "The challenges of not spilling and brewing beer successfully while drinking it"

BA IN PROCRASTINATING 2016-2019
The University of Wasted Time | Naples, Italy

- Won the most prestigious award in the mastery of procrastination
- Thesis topic: "New document"

ACHIEVEMENTS

Awards

- Gold medal for sleeping at the boring brewing conferences while the music is playing very loudly and the whole thing is a complete mess
- Best subspace super-admiral

Scholarships

- WOOF scholarship for petting puppies
- WhOoOpS scholarship for generating stupid text like this one
- NomNom scholarship for candy studies
